Errata

- **Paper I–III**: The column length of the BPX-70 given in Papers I, II and III (70 m) is incorrect. The correct length is 60 m. This is a typing error in Paper I (that was copied in Papers II and III). The correct length is applied for calculating the injector pressures and flow settings.

- **Paper II**: The mass spectra of the 19:4 compound given in Paper II was of too poor quality to determine the double bond positions, and the compound should therefore be denoted as 19:4 \( n \)-x (as in Paper VIII) instead of 19:4 \( n \)-3. The ECL values given in Paper VIII indicate that this is not the \( n \)-3 isomer.

- **Paper I, section 3.5**: Typographical error: ‘\( \leq 0.5 \)’ should be ‘\(<-0.5 \)’.

- **Paper X, Equation 10**: Typographical error: The entire equation should be under the root (see equation 15 in section 1.4).
