## MUFI character recommendation

Characters in the official Unicode Standard and in the Private Use Area for Medieval texts written in the Latin alphabet

## 

※ Version I.O (8 December 2003)
※ Compliant with the Unicode Standard version 4.0
※ Medieval Unicode Font Initiative (MUFI)
※ www.hit.uib.no/mufi

## Editor

Odd Einar Haugen, University of Bergen, Norway

## Background $\mathcal{E}$ contributors

The present recommendation is a major revision and extension of two proposals published on the MUFI web site:
D A proposal for subranges within the Private Use Area of Unicode (15 June 2002)
D A proposal for supplementary characters in Unicode (5 February 2003)
These proposals received a number of helpful comments from (in alphabetical order) Jim Allan (U.S.), Deborah W. Anderson (Berkeley, CA), Peter S. Baker (Charlottesville, VA), Michael Beddow (Leeds), António H.A. Emiliano (Lisboa), Michael Everson (Dublin), Jost Gippert (Frankfurt am Main), Juan-José Marcos (Plasencia, Spain), Rick McGowan (Unicode consortium), Susana T. Pedro (Lisboa), David J. Perry (Rye, NY), Gerhard Schumacher (Köln), Ken Whistler (Unicode consortium) and Christian Wittern (Kyoto).

The present recommendation is the result of a meeting held in Bergen, Norway, 30-31 August 2003. Participants at this meeting were Odd Einar Haugen (Bergen), Michael Everson (Dublin), Michael Irlenbusch (Bergen), Alec McAllister (Leeds), Gerhard Schumacher (Köln), and Tarrin Wills (Sydney). The recommendation was published 8 September 2003 on the MUFI site for public review and has been discussed electronically within the MUFI group in the ensuing months.

Many aspects of this recommendation will be controversial, and more than one of the contributors and advisors listed above may disagree with the solutions chosen in the recommendation. It is, however, clear that this recommendation would have progressed much more slowly and would have been much inferior had it not been for all the help and comments received. The editor would like to thank all contributors for their assistance in this project.

## Publication details

This version of the recommendation was published on the MUFI web site, www.hit.uib.no/mufi, on 8 December 2003. Please check this site for updates. ISBN 82-90500-58-0

## Contents

## A: Characters in the Unicode Standard p. 7-50

| 1 | Basic Latin | p. 7 | 7 | Combining Diacritical Marks | p. 32 | 13 | General Punctuation | p. 44 |
| ---: | :--- | ---: | ---: | :--- | ---: | ---: | :--- | :--- |
| 2 | Latin-1 Supplement | p. 15 | 8 | Greek and Coptic | p. 35 | 14 | Mathematical Operators | p. 49 |
| 3 | Latin Extended-A | p. 23 | 9 | Georgian | p. 35 | 15 | Dingbats |  |
| 4 | Latin Extended-B | p. 27 | 10 | Runic | p. 36 | 16 | Misc. Math. Symbols-A |  |
| 5 | IPA Extensions | p. 30 | 11 | Phonetic Extensions | p. 50 |  |  |  |
| 6 | Spacing Modifying Letters | p. 31 | 12 | Latin Extended Additional | p. 36 |  |  |  |

## B: Characters in the Private Use Area of the Unicode Standard p. 5I-99

|  | Base characters |  |  | Precomposed characters |  |  | Variant letter forms |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Ligatures | p. 52 | 15 | Characters with overline or macron | p. 70 | 30 | Nordic | p. 94 |
| 2 | Small capitals | p. 53 | 16 | Characters with acute accent | p. 73 | 31 | English | p. 98 |
| 3 | Enlarged minuscules | p. 54 | 17 | Characters with double acute accent | p. 76 |  |  |  |
| 4 | Base line abbreviation characters | p. 57 | 18 | Characters with dot above | p. 78 |  |  |  |
| 5 | Modified base line abbrev. characters | p. 58 | 19 | Characters with dot below | p. 80 |  |  |  |
| 6 | Combining marks | p. 60 | 20 | Characters with diaeresis | p. 85 |  |  |  |
| 7 | Combining superscript characters | p. 61 | 21 | Characters with hook above | p. 86 |  |  |  |
| 8 | Punctuation marks | p. 63 | 22 | Characters with ogonek | p. 88 |  |  |  |
| 9 | Critical and epigraphical signs | p. 64 | 23 | Characters with breve | p. 89 |  |  |  |
| 10 | Metrical symbols | p. 66 | 24 | Characters with macron and breve | p. 90 |  |  |  |
|  |  |  | 25 | Characters with macron and acute | p. 92 |  |  |  |

Appendix: How many characters? p. 100-104

## Introduction

This recommendation contains a set of characters for the use of medievalists and, to some extent, classicists. The aim of the recommendation is (1) to establish a selection of characters from the official Unicode Standard and (2) to coordinate the usage of code points in the Private Use Area.

The recommendation contains a representative glyph for each character, an entity name, a Unicode code point, and a descriptive name.

## Glyphs

The glyphs used in this recommendation are for guidance only. They are based on the font Alphabetum by Juan-José Marcos (Plasencia, Spain).

## Entity names

Entities are used in numerous encoding schemes such as SGML/XML. For the sake of transparency and interchangeability, it is recommended that entities as far as possible conform to the standard ISO entity sets.

In addition to the ISO entities, a number of entities for characters not designated in this standard are needed. This recommendation uses the syntax and inventory defined in The Menota handbook, ch. 2 and 5 (www.hit.uib.no/menota/guidelines), summarised in the table below.

| Base line character | main type | variant | ligature | fixed modification | loose modification |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{array}{\|l\|} \hline \mathrm{A} \\ \mathrm{a} \\ \mathrm{~B} \\ \mathrm{~b} \\ \mathrm{C} \\ \mathrm{c} \\ \\ \\ \text { etc. } \end{array}$ | anc <br> comb <br> enl <br> ins <br> run <br> scap <br> unc | brk <br> close <br> dotless <br> high <br> long <br> med <br> open <br> rot <br> squ | lig <br> ligred | bar <br> baracr <br> barbl <br> des <br> flour <br> hook <br> ogon <br> ovl <br> slash <br> strok | acute <br> breve <br> circ <br> curl <br> dblac <br> dot <br> dotbl <br> grave <br> macr <br> sup <br> uml |

Note that not all slots need to be filled in; in most cases only one or two slots are used in addition to the base line character. The meaning of the various parts is explained in this table, listed in alphabetical order:

| $\begin{aligned} & \text { acute }=\text { acute accent } \\ & \text { anc }=\text { anceps } \\ & \text { bar }=\text { bar above } \\ & \text { baracr = bar across } \\ & \text { barbl }=\text { bar below } \\ & \text { brev }=\text { breve (short) } \\ & \text { brk }=\text { broken } \\ & \text { circ }=\text { circumflex } \end{aligned}$ | ```close \(=\) closed form comb \(=\) combining curl \(=\operatorname{curl}\) (hook above) dblac = double acute accent des \(=\) descending \(\operatorname{dot}=\operatorname{dot}\) above dotbl \(=\) dot below dotless \(=\) no dot above``` | ```enl \(=\) enlarged flour \(=\) flourish grave = grave accent high \(=\) high position hook = hook above ins = Insular lig = ligature ligred \(=\) ligature reduced form``` | ```long = long form macr = macron (long) med = medium-high position ogon = ogonek (hook below) open = open form ovl = overline rot = rotunda run = Runic``` | $\begin{aligned} & \text { scap = small capital } \\ & \text { slash = diagonal stroke } \\ & \text { squ = square form } \\ & \text { strok = horizontal stroke } \\ & \text { sup = superscript } \\ & \text { uml = Umlaut (diaeresis) } \\ & \text { unc = Uncial } \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: |

Some entities, especially for non-alphabetic characters in Basic Latin, Latin-1 Supplement and General Punctuation, have more compressed names, modelled on already existing entity names.

An updated list of ISO conformant entities can be found at the Oasis web site: www.oasis-open.org/cover/xml-ISOents.txt

## Code points

Code points are given in the hexadecimal format and refer to the Unicode Standard version 4.0. The allocation of code points in the Private Use Area has been coordinated with several font projects (notably Titus and Junicode) with the aim of establishing a common usage. Further information can be found on the MUFI web site (www.hit.uib.no/mufi).

Code points in the Unicode Standard are usually given with the prefix 'U+', e.g. U+003A for the colon, U+003B for the semicolon, etc. For reasons of brevity, this prefix has been left out in this recommendation.

All code points are located in the Basic Multilingual Plane (BMP) of the Unicode Standard. The Private Use Area of the BMP has a total of 6,400 slots. A large number of PUA characters in this recommendation are concentrated in the section F100-F3FF, but many are also to be found in the section E000-F0FF, coordinated with the Titus project. Metrical characters are coordinated with the Alphabetum font and located in the F700-F76F section.

Characters in the PUA have been divided into subranges. Note that the allocation of code points is not necessarily contiguous.

Since Titus and Junicode were already established when this recommendation was made, some code point conflicts were inevitable. This recommendation gives a single code point for every character in the PUA, but lists duplicate code points in other fonts, notably Junicode, where relevant.

Characters in the PUA should be decommissioned as soon as they can be encoded with ordinary Unicode characters. The MUFI web site has further information on this.

## Descriptive names

Each character has been given a descriptive name, as far as possible according to the rules in the Unicode Standard. The Menota handbook ch. 2 has further details on the interpretation of the Unicode naming rules.

In a few cases, an alternative MUFI descriptive name has been introduced. Thus, the character located at 223B in Mathematical Operators (p. 49 below) has the name HOMOTHETIC in the Unicode Standard, but since this character could be used for a Latin abbreviation (meaning 'est'), a MUFI descriptive name has been listed, LATIN ABBREVIATION SIGN EST.

## MUFI compliant fonts

Font designers are encouraged to design fonts which comply with the code point allocations in this recommendation. A list of MUFI compliant fonts will be available on the MUFI web site.

## The Unicode Standard

The Unicode Standard can be accessed at www.unicode org. This site contains a wealth of information on the standard, including code charts in PDF for all ranges.

## A: Characters in the Unicode Standard

## I: Basic Latin

All 96 characters in this chart have been selected. Characters in Basic Latin may be encoded without the use of entities, but entities have been defined for characters other than the digits $0-9$ and the alphabetic characters $\mathrm{A}-\mathrm{Z}$ and $\mathrm{a}-\mathrm{z}$.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | \&sp; | 0020 | SPACE |  |
| $!$ | \! |  | 0021 | EXCLAMATION MARK |  |
| " | \" |  | 0022 | QUOTATION MARK |  |
| In SGML/XML encoded documents, the quotation mark is used to delimit attributes. The entity ‘\"' refers to the quotation mark as such. |  |  |  |  |  |
| \# | \# |  | 0023 | NUMBER SIGN |  |
| \$ | \$ |  | 0024 | DOLLAR SIGN |  |
| \% | \% |  | 0025 | PERCENT SIGN | LATIN ABBREVIATION SIGN AMPERSAND |
| \& | \& | \&ampet; | 0026 | AMPERSAND |  |

In SGML/XML encoded documents, the ampersand is used as the opening character for an entity name, as exemplified throughout this recommendation. The ampersand as such should be encoded with the entity '\&'. In Medieval primary sources, the ampersand was used as an abbreviation for 'et' (and). An entity such as '\&ampet;' might be used to indicate that this sign is a specific Medieval abbreviation mark.

| , \' | \&apo; | 0027 | APOSTROPHE | LATIN ABBREVIATION SIGN APOSTROPHE |
| :--- | :--- | :--- | :--- | :--- | :--- |

In SGML/XML encoded documents, the apostrophe may be used in a technical sense. To be able to refer to the apostrophe as such, a separate entity is needed, '\''. - A sign looking like the apostrophe was used as an abbreviation for 'i' or 'e'. Cf. D.A. Seip, Paleoografi: Norge og Island (Nordisk kultur $23: B$ ), Oslo etc. 1954, p. 125. In such cases, the encoder might want use an entity like '\&apo;'.

| $($ | \( |  | 0028 | LEFT PARENTHESIS |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $)$ | \) |  | 0029 | RIGHT PARENTHESIS |  |
| $*$ | \* |  | 002 A | ASTERISK |  |
| + | \+ |  | 002 B | PLUS SIGN |  |
| , | \, |  | 002 C | COMMA |  |
| - | \‐ |  | 002 D | HYPHEN-MINUS |  |

As the name HYPHEN-MINUS indicates, this character is ambiguous. For an unambiguous hyphen character, see 2010 HYPHEN in General Punctuation (p. 45 below), and for an unambiguous minus character, see 2212 MINUS in Mathematical Operators (p. 49).

| . | \. | \˙ | 002 E | FULL STOP | LATIN ABBREVIATION SIGN SPACING DOT |
| :--- | :--- | :--- | :--- | :--- | :--- |

The full stop is often used as a mark of abbreviation, typically in suspended (truncated) words. An entity such as '\˙' might be used to indicate that it is an abbreviation mark rather than a punctuation mark.

| $/$ | $\& s o l ;$ | 002 F | SOLIDUS |  |
| :--- | :--- | :--- | :--- | :--- | :--- |

| 0 |  |  | 0030 | DIGIT ZERO |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  | 0031 | DIGIT ONE |  |
| 2 |  |  | 0032 | DIGIT TWO |  |
| 3 |  |  | 0033 | DIGIT THREE |  |
| 4 |  |  | 0034 | DIGIT FOUR |  |
| 5 |  |  | 0035 | DIGIT FIVE |  |
| 6 |  |  | 0036 | DIGIT SIX |  |
| 7 |  |  | 0037 | DIGIT SEVEN |  |
| 8 |  |  | 0038 | DIGIT EIGHT |  |
| 9 |  |  | 0039 | DIGIT NINE |  |
| : | \& colon; |  | 003A | COLON |  |
| ; | \; | \&ed; | 003B | SEMICOLON | LATIN ABBREVIATION SIGN ED |
| In Medieval script, a sign looking like the semicolon was commonly used as an abbreviation for 'eð' or 'ed'. In such cases, the encoder might want to use an entity like '\&ed;' to indicate that this sign is a specific Medieval abbreviation mark. |  |  |  |  |  |

| $<$ | \< |  | 003 C | LESS-THAN SIGN |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| In SGML/XML encoded doccuments, the less-than sign is used as the opening character of an element name, e.g. <text>. To be able to refer to the less-than <br> sign as such, a separate entity is needed, ‘\<'. |  |  |  |  |  |
| $=$ | \= |  | 003 D | EQUALS SIGN |  |
| $>$ | $\& g t ;$ |  | $003 E$ | GREATER-THAN SIGN |  |

In SGML/XML encoded doccuments, the greater-than sign is used as a closing character of an element name, e.g. <text>. To be able to refer to the greaterthan sign as such, a separate entity is recommended, '\>'.

| $?$ | \? |  | 003 F | QUESTION MARK |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| @ | \@ |  | 0040 | COMMERCIAL AT |  |
| A |  |  | 0041 | LATIN CAPITAL LETTER A |  |
| B |  |  | 0042 | LATIN CAPITAL LETTER B |  |
| C |  |  | 0043 | LATIN CAPITAL LETTER C |  |
| D |  |  | 0044 | LATIN CAPITAL LETTER D |  |
| E |  |  | 0045 | LATIN CAPITAL LETTER E |  |
| F |  |  | 0046 | LATIN CAPITAL LETTER F |  |

## 2: Latin-I Supplement

All 96 characters in this range have been selected, although many of them are not used in Medieval script. However, these characters are so frequently used in other contexts that it is advisable to include the whole range in a Medieval font. For this and all ensuing code charts entities are being used in many SGML/ XML documents.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name |
| :--- | :--- | :--- | :--- | :--- |
|  | \  |  | $00 A 0$ | NO-BREAK SPACE |
| $\boldsymbol{j}$ | $\&$ iexcl; |  | $00 A 1$ | INVERTED EXCLAMATION MARK |
| $\not \subset$ | $\& c e n t ;$ |  | $00 A 2$ | CENT SIGN |
| $\boldsymbol{f}$ | $\& p o u n d ;$ |  | $00 A 3$ | POUND SIGN |

| a | \¤ |  | 00A4 | CURRENCY SIGN |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{Z}$ | \¥ |  | $00 A 5$ | YEN SIGN |
| I | \¦ |  | $00 A 6$ | BROKEN BAR |
| S | \§ |  | $00 A 7$ | SECTION SIGN |
| .. | \¨ |  | $00 A 8$ | DIAERESIS |

The entities '\¨' and '\&Ddot;' are also being used for this character.

| (C | \© |  | 00 A 9 | COPYRIGHT SIGN |
| :--- | :--- | :--- | :--- | :--- |
| a | \ª |  | 00 AA | FEMININE ORDINAL INDICATOR |
| « | \« |  | 00 AB | LEFT-POINTING DOUBLE ANGLE QUOTATION MARK |
| $\neg$ | \¬ |  | 00 AC | NOT SIGN |
|  | \­ |  | 00 AD | SOFT HYPHEN |
| ® | \® |  | 00 AE | REGISTERED SIGN |
| - | \¯ |  | 00 AF | MACRON |

| - | \& deg; | 00B0 | DEGREE SIGN |
| :---: | :---: | :---: | :---: |
| $\pm$ | \± | 00B1 | PLUS-MINUS SIGN |

## 4: Latin Extended-B

In Unicode 4.0 this range has 179 characters, of which 28 characters have been selected. Some of these have acute accent, macron, dot above, or ogonek, others are individual base characters, including Gothic and Old English ones.

| Glyph | ISO entity | MuFI entity | Code point | Unicode descriptive name | MuFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Ђ |  | \&bstrok; | 0180 | LATIN SMALL LETTER B WITH STROKE |  |
| h |  | \&hwair; | 0195 | LATIN SMALL LETTER HV | LATIN SMALL LETTER HWAIR |
| K |  | \&kslonglig; | 0199 | LATIN SMALL LETTER K WITH HOOK | LATIN SMALL LIGATURE K <br> AND LONG S |

| t |  | \&lbar; | 019A | LATIN SMALL LETTER L WITH BAR |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\mathrm{\eta}$ |  | \&nlrleg; | 019 E | LATIN SMALL LETTER N WITH LONG RIGHT LEG |  |
| R | \&YR; | 01 A 6 | LATIN LETTER YR |  |  |

This is the capital form of the character and seldom used. For the small form, the small capital R should be used, cf. 0280 on p. 30 below.

| $Z$ |  | \&Zstrok; | 01 B 5 | LATIN CAPITAL LETTER Z WITH STROKE |
| :--- | :--- | :--- | :--- | :--- |

## 5: IPA Extensions

In Unicode 4.0 this range has 94 characters. The selection below contains 15 characters, mostly small capitals. Additional small capitals are located in Phonetic Extensions, p. 36 below, and PUA subrange 2 Small capitals, p. 53 below.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $\bigcirc$ |  | \& con; | 0254 | LATIN SMALL LETTER OPEN O | LATIN ABBREVIATION SIGN CON |
| d |  | \&dtail; | 0256 | LATIN SMALL LETTER D WITH TAIL |  |
| $f$ |  | \&jdtlstrok; | 025F | LATIN SMALL LETTER DOTLESS J WITH STROKE |  |
| G |  | \&gscap; | 0262 | LATIN LETTER SMALL CAPITAL G |  |
| $h$ | [\&hhook;] | \& hslonglig; | 0266 | LATIN SMALL LETTER H WITH HOOK | LATIN SMALL LIGATURE H AND LONG S |

| © |  | \&oeligscap; | 0276 | LATIN LETTER SMALL CAPITAL OE |  |
| 1 |  | \&rdes; | 027C | LATIN SMALL LETTER R WITH LONG LEG |  |
| R |  | \&rscap; | 0280 | LATIN LETTER SMALL CAPITAL R |  |

| $\boldsymbol{Z}$ |  | \&ubar; | 0289 | LATIN SMALL LETTER U BAR |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Y | \&yscap; | 028 F | LATIN LETTER SMALL CAPITAL Y |  |  |
| B | \&bscap; | 0299 | LATIN LETTER SMALL CAPITAL B |  |  |
| H | \&hscap; | 029 C | LATIN LETTER SMALL CAPITAL H |  |  |
| L | \&lscap; | 029 F | LATIN LETTER SMALL CAPITAL L |  |  |

## 6: Spacing Modifying Letters

In Unicode 4.0 this range has 80 characters. The selection below contains 6 modifying letters. Note that these letters are spacing, i.e. occupying a separate position on the base line. Combining diacritical marks are listed in the next section.

| Glyph | ISO entity | MUFI entity | Code point | Descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| $\checkmark$ | $\&$ breve; |  | 02 D 8 | BREVE |
| $\cdot$ | $\& d o t ;$ |  | 02 D 9 | DOT ABOVE |
| $\circ$ | $\& r i n g ;$ |  | 02 DA | RING ABOVE |
| c | \˛ |  | 02 DB | OGONEK |

| $\sim$ | $\&$ tilde; |  | 02 DC | SMALL TILDE |
| :--- | :--- | :--- | :--- | :--- |
| $״$ | $\& d b l a c ;$ |  | 02 DD | DOUBLE ACUTE ACCENT |

## 7: Combining Diacritical Marks

In Unicode 4.0 this range has 96 characters, of which 31 have been selected here. The combining characters at the end are recent additions to the Unicode Standard. Additional superscript characters are located in PUA subrange 7 below, p. 61 . A dotted circle has been used throughout to illustrate the position of the marks in relation to a typical base line character.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :---: | :---: | :---: | :---: | :---: | :---: |
| ) |  | \&combgrave; | 0300 | COMBINING GRAVE ACCENT |  |

| x | \&xsup; | 036F | COMBINING LATIN SMALL LETTER X |  |

## 8: Greek and Coptic

Only a single character has been selected from this range, which contains 120 characters in Unicode 4.0. Presently, this range contains Greek and Coptic characters, but Coptic is likely to be disambiguated from Greek and to be given a separate range in a future version of the Unicode Standard.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\theta$ | \&thgr; | \&obiit; | 03B8 | GREEK SMALL LETTER THETA | LATIN ABBREVIATION SIGN OBIIT |

## 9: Georgian

Only a single character has been selected from this range, which contains 80 characters in Unicode 4.0. This character has a duplicate code point in the present version of Junicode (0.6.3).

| Glyph | ISO entity | MUFI entity | Code point | (Junicode) | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\therefore$ |  | \&tridotright; | 10 FB | F162 | GEORGIAN PARAGRAPH <br> SEPARATOR | PUNCTUATION MARK RIGHT-POINTING <br> TRIANGULAR DOTS |

## 10: Runic

Two characters have been selected from this range, which contains 81 characters in Unicode 4.0. Both characters were used as abbreviation signs in the context of the Latin alphabet. Many Medieval fonts will most likely include the whole Runic range.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{Y}$ |  | \&frun; | 16 A 0 | RUNIC LETTER FEHU FEOH FE F | RUNIC LETTER F |
| $\Psi$ |  | \&mrun; | 16 D 8 | RUNIC LETTER LONG-BRANCH-MADR M | RUNIC LETTER M |

## II: Phonetic Extensions

In Unicode 4.0 this range has 108 characters, of which 15 have been selected here, all small capitals. For additional small capitals, see IPA Extensions, p. 30 above, and PUA subrange 2 Small capitals, p. 53 below.

| Glyph | ISO entity | MUFI entity | Code point | Descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| A |  | $\&$ ascap; | 1 D00 | LATIN LETTER SMALL CAPITAL A |
| Æ |  | $\&$ aeligscap; | 1 D01 | LATIN LETTER SMALL CAPITAL AE |
| C | \&cscap; | 1 D04 | LATIN LETTER SMALL CAPITAL C |  |

| V | \&vscap; | 1D20 | LATIN LETTER SMALL CAPITAL V |
| W | \&wscap; | 1D21 | LATIN LETTER SMALL CAPITAL W |
| Z | \&zscap; | 1D22 | LATIN LETTER SMALL CAPITAL Z |

## 12: Latin Extended Additional

In Unicode 4.0 this range has 246 characters. The selection below contains 76 characters, many with dot below, others with hook above, or macron and acute. For additional precomposed characters of these types, see PUA subranges 19, 21 and 25, pp. 80, 86 and 92 below. Note that two characters below have duplicate code points in the present version of Junicode (0.6.3), 1E17 and 1E53.

| Glyph | ISO entity | MuFl entity | Code point | (Junicode) | Descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- |

## 13: General Punctuation

In Unicode 4.0 this range has 97 characters. The selection below contains 48 characters, including a number of spaces with no visible glyph. Note that one character, 204A, did until recently have a duplicate code point in Junicode.

| Glyph | ISO entity | MUFI entity | Code point | (Junicode) | Unicode descriptive name | MUFI descriptive name |

| P | \&revpara; | 204B |  | REVERSED PILCROW SIGN |  |

## 14: Mathematical Operators

Three characters have been selected from this range, which contains 256 characters in Unicode 4.0. Since two of them have a non-mathematical usage, alternative MUFI descriptive names have been assigned. Note that 223B has a duplicate code point in the present version of Junicode (0.6.3).

| Glyph | ISO entity | MUFI entity | Code point | (Junicode) | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| - | \− |  | 2212 |  | MINUS |  |
| $\therefore$ | \∴ |  | 2234 |  | THEREFORE | PUNCTUATION MARK UPWARDS-POINTING <br> TRIANGULAR DOTS |
| $\div$ |  | \&est; | $223 B$ | F150 | HOMOTHETIC | LATIN ABBREVIATION SIGN EST |

## 15: Dingbats

A single character has been selected from this range, which contains 174 characters in Unicode 4.0.

| Glyph | ISO entity | MUFI entity | Code point | Unicode descriptive name | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\dagger$ |  | $\&$ cross; | 271D | LATIN CROSS | LATIN ABBREVIATION SIGN CROSS |

## 16: Miscellaneous Mathematical Symbols-A

Four characters have been selected from this range, which contains 28 characters in Unicode 4.0. Note that the angle brackets from this range have been chosen rather than 2329 and 232A in Miscellaneous Technical, since the latter are canonical equivalent to the very wide brackets 3008 and 3009 in CJK Symbols and Punctuation. This is to avoid spacing problems which might arise if the CJK brackets were substituted.

| Glyph | ISO entity | MuFl entity | Code point | Unicode descriptive name | MuFI descriptive name |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $\llbracket$ |  | \&lwhsqb; | 27E6 | MATHEMATICAL LEFT WHITE <br> SQUARE BRACKET | LEFT WHITE SQUARE BRACKET |
| $\rrbracket$ | \&rwhsqb; | $27 E 7$ | MATHEMATICAL RIGHT WHITE <br> SQUARE BRACKET | RIGHT WHITE SQUARE BRACKET |  |

| $\rangle$ |  | \&rangb; | 27E9 | MATHEMATICAL RIGHT ANGLE <br> BRACKET | RIGHT ANGLE BRACKET |

## B: Characters in the Private Use Area of the Unicode Standard

Important note: Characters in the Private Use Area (PUA) should be used with great caution. The characters listed in this section are supported by MUFI compliant fonts, but if a document is displayed with another, non-compliant font, these characters will show up incorrectly (with the unlikely exception of characters that by coincidence are located at the same code points). For documents with long life expectancy, it is strongly recommended that PUA characters should be encoded with mark-up or entities, and that PUA characters should be used for the final display only, whether on screen or in print. For documents with short life expectancy, characters may be used with less caution as long as the future problems of storage and interchangeability are considered.

MUFI recommends that if a character in the PUA is accepted by the Unicode Standard it should be decommissioned and moved to the new code point. Thus, newer versions of MUFI compliant fonts may lack characters of this type (or, preferably, they should be shown within a triangular warning sign). For this reason, anyone who uses a MUFI compliant font for a document should keep a copy of that particular font, and make a PDF version of the file for future reference. Earlier versions of fonts may not be accessible at a later date.

Finally, note that some characters have duplicate code points to accommodate the Junicode font as of version 0.6.3. This is due to an unavoidable code point conflict between the PUA of this font and other fonts that were coordinated by the MUFI group. The code points given in the MUFI column should be used hereafter, but for the sake of backward compatibility, older code points in Junicode may be duplicated in some fonts. This applies to a total of 34 characters in subranges $5,10,16,23,24,25$ and 30 below.

## Category I: Base characters

Base characters are base line characters or combining characters making up a part of a composite character. The allocation of code points has been coordinated with characters in the Titus Cyberbit, Junicode and Alphabetum fonts. Subranges 1, 2, 3, 5 and 7 have been placed in the Titus section, E000-F0FF; subranges $4,6,8$ and 9 in the F100-F1FF section (using already existing Junicode code points wherever possible), and subrange 10 is placed in the F700-F71F section (using already existing Alphabetum code points).

Four subranges, 11-14, have been reserved for future additions.

## Subrange I: Ligatures

Ligatures are two base line characters which are joined so that they form a new, composite base line character. Some consist of two identical characters, e.g. ' $a+a$ ', others of different characters, e.g. ‘ $a+v$ '. In Medieval Nordic manuscripts, ligatures may be used to denote length, ‘a+a', diphthong, 'a+v', or a distinct vowel quality, often mutation (Umlaut), 'a+v'. Only ligatures which reflect a distinct phonological value should be recognised as characters of their own. - The broken character ' l ' representing ' 1 l ' should be seen as a ligature of two stems, broken in the middle.

Unicode 4.0 does not recognise any of the ligatures in the list below.

| Glyph | MUFI entity | MUFI code point | Descriptive name |
| :--- | :--- | :--- | :--- |
| AA | \&AAlig; | EF90 | LATIN CAPITAL LIGATURE AA |
| a | \&aalig; | EF91 | LATIN SMALL LIGATURE AA |
| AO | \&AOlig; | EF92 | LATIN CAPITAL LIGATURE AO |
| a | \&aolig; | EF93 | LATIN SMALL LIGATURE AO |
| AJ | \&AUlig; | EF94 | LATIN CAPITAL LIGATURE AU |
| \&aulig; | \&AVlig; | EF96 | LATIN SMALL LIGATURE AU |
| A | \&avlig; | EF97 | LATIN CAPITAL LIGATURE AV |
| av | \&AVligslash; | EF98 | LATIN CAPITAL LIGATURE AV WITH STROKE |
| A |  |  |  |

| み | \&avligslash; | EF99 | LATIN SMALL LIGATURE AV WITH STROKE |
| :--- | :--- | :--- | :--- |
| Ay | \&AYlig; | EF9A | LATIN CAPITAL LIGATURE AY |
| ay | \&aylig; | EF9B | LATIN SMALL LIGATURE AY |
| $\mathbf{1}$ | \&lbrk; | EF9C | LATIN SMALL LETTER BROKEN L |

## Subrange 2: Small capitals

Small capitals have the same form as majuscules (capital letters), but are usually drawn with the same height as a minuscule (small) letter such as ' $x$ '. In Medieval Nordic manuscripts, small capitals were used to denote geminates, i.e. long consonants, or they were used ornamentally. The letters 'B', 'D', 'G', ' M ', ' N ', ' R ', ' S ' and ' $T$ ' were most frequently used as geminates, while these and other letters might also be used as ornaments in the whole or in parts of highlighted words. Some of the small capitals, e.g. ' O ' and ' C ', are difficult to distinguish from minuscule letters.

Unicode 4.0 has allocated nine small capitals to the range IPA Extensions, sc. 'B', ' $\mathrm{G}^{\prime}$, ' $\mathrm{H}^{\prime}$, ' I ', 'L', ' N ', ' E ', ' R ' and ' Y ' (cf. p. 30 above), and another 15 small capitals for the Uralic Phonetic Alphabet to the range Phonetic Extensions, 'A', 'E', 'C', 'D', 'ETH', 'E', 'J', 'K', 'M', 'O', 'P', 'T', 'U', 'V', 'W' and ' $Z$ ' (cf. p. 36 above). Thus, only a handful of small capitals remain unrepresented. Of these, only small capital ' S ' and ' F ' can appear as geminates in Medieval Nordic. The rest, i.e. 'Q', 'THORN' and 'X' can only appear as small capitals in ornamental usage.

| Glyph | MUFI entity | MUFI code point | MUFI descriptive name |
| :--- | :--- | :--- | :--- |
| F | \&fscap; | EF05 | LATIN LETTER SMALL CAPITAL F |
| Q | \&qscap; | EF0C | LATIN LETTER SMALL CAPITAL Q |

| S | \&sscap; | EF0E | LATIN LETTER SMALL CAPITAL S |
| :--- | :--- | :--- | :--- |
| P | \&thscap; | EF15 | LATIN LETTER SMALL CAPITAL THORN |
| X | \&xscap; | EF11 | LATIN LETTER SMALL CAPITAL X |

## Subrange 3: Enlarged minuscules

Enlarged minuscules are recognised as separate characters by some scholars, cf. e.g. Andrea de Leeuw van Weenen (A Grammar of Möд̈ruvallabók, CNWS 85, Leiden 2000). The traditional view has been to interpret these characters as variants of majuscules and encode them as such. It can be argued that this is a functional rather than a graphemic point of view and that it obscures the obvious distinction between e.g. ' $A$ ' (the majuscule) and ' $a$ ' (the enlarged minuscule).

Unicode 4.0 does not recognise enlarged minuscules.

| Glyph | MuFl entity | MUFI code point | MuFI descriptive name |

| Y | \&yenl; | EEFB | LATIN ENLARGED LETTER SMALL Y |
| Z | \&zenl; | EEFC | LATIN ENLARGED LETTER SMALL Z |

## Subrange 4: Base line abbreviation characters

This range includes those abbreviation signs which typically occupy a position on the base line. Very few abbreviation signs are included in Unicode 4.0. An exception is the Tironian sign for 'et', which is found in the range General punctuation, 204A (p. 48 above).

The Runic characters ' $f$ ' and ' $m$ ' are sometimes used as abbreviation marks; they have been included in the range Runic, as 16AO and 16D8 respectively (p. 36 above). Since they are used with their alphabetical names as abbreviation ('fé' and ' maðr' respectively), it is not necessary to define them as separate characters.

Several abbreviation signs can be identified with already existing characters in Unicode 4.0:

- Basic Latin: the ampersand, 0026, for 'et' (= the conjunction 'and') and the apostrophe, 0027, for 'i' or 'e' (pp. 7-8).
- IPA Extensions: The open 'o', 0254, similar to the abbreviation sign for 'con' (p. 30).
- Greek and Coptic: The 'theta' character, 03B8, for 'obiit' (p. 35).
- Mathematical Operators: The homothetic sign, 223B, for 'est' (p. 49).
- Dingbats: The Latin cross, 271D (p. 50).

| Glyph | MuFl entity | MuFI code point | (Junicode) | MuFI descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| 9 | \&condes; | F156 | F156 | LATIN ABBREVIATION SIGN CON |
| 7 | \&ET; | F142 | F142 | LATIN ABBREVIATION LARGE SIGN ET |
| $\boldsymbol{z}$ | \&etslash; | F158 |  | LATIN ABBREVIATION SIGN ET WITH STROKE |
| $\boldsymbol{4}$ | \&rum; | F154 | F154 | LATIN ABBREVIATION SIGN RUM |
| $\mathbf{8}$ | \&de; | F159 |  | LATIN ABBREVIATION SIGN DE |

| $\boldsymbol{\rho}$ | \&is; | F15A |  | LATIN ABBREVIATION SIGN IS |
| :--- | :--- | :--- | :--- | :--- |
| $\boldsymbol{3}$ | \&etfin; | F155 | F155 | LATIN ABBREVIATION SIGN FINAL ET |

## Subrange 5: Modified base line abbreviation characters

This range includes a number of abbreviation characters, typically a base line character with a stroke across the ascender. A few abbreviation signs can be identified with already existing characters in the Unicode Standard:

- Latin Extended-B: ' $k$ with hook', 0199, similar to the ligature of ' $k$ ' and 'long s' (p. 27).
- IPA Extensions: ' h with hook', 0266, similar to the ligature of ' h ' and 'long s', and 'u with bar', 0289 (p. 30).

Note that six characters have duplicate code points in the present version of Junicode (0.6.3): E7C5, E270, E670, E68A, E27D and E67D.

| Glyph | MuFl entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| p | \&thornslonglig; | E734 |  | LATIN SMALL LIGATURE THORN AND LONG S |

| $\mathbf{p}$ | \&thornbardes; | E7A0 |  | LATIN SMALL LETTER THORN WITH STROKE THROUGH DESCENDER |
| $\mathbf{P}$ | \&Pflour; | E27D | F146 | LATIN CAPITAL LETTER P WITH FLOURISH |
| $\mathbf{P}$ | \&pflour; | E67D | F147 | LATIN SMALL LETTER P WITH FLOURISH |

## Subrange 6: Combining marks

This range includes those abbreviation signs which typically occupy a position above, through or below another base line character. Combining diacritical marks are also included in this range.

Unicode 4.0 has a large selection in Combining Diacritical Marks (p. 32 above). The list below has additional marks.

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| $\vdots$ | \&arbar; | F1C0 |  | COMBINING ABBREVIATION MARK BAR ABOVE WITH DOT |
| ؛ | \&er; | F152 | F152 | COMBINING ABBREVIATION MARK SUPERSCRIPT ER (ZIG-ZAG SIGN) |

The combining zig-zag above has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 035B in Combining Diacritical Marks.

| ¢ | \&ra; | F157 | F157 | COMBINING ABBREVIATION MARK SUPERSCRIPT RA (OMEGA SIGN) |
| :---: | :---: | :---: | :---: | :---: |
| $\bar{u}$ | \&rabar; | F1C1 |  | COMBINING ABBREVIATION MARK SUPERSCRIPT RA (OMEGA SIGN) WITH BAR ABOVE |
| 2 | \&ur2; | F153 | F153 | COMBINING ABBREVIATION MARK SUPERSCRIPT UR (2-SIGN) |
| $\infty$ | \&ur8; | F1C2 |  | COMBINING ABBREVIATION MARK SUPERSCRIPT UR (8-SIGN) |
| $n$ | \&ur8open; | F1C3 |  | COMBINING ABBREVIATION MARK SUPERSCRIPT UR (OPEN 8-SIGN) |
| ? | \&ussep; | F151 | F151 | SPACING ABBREVIATION MARK SUPERSCRIPT US (9-SIGN) |

| ? | \&us; | F15B |  | COMBINING ABBREVIATION MARK SUPERSCRIPT US (9-SIGN) |
| :--- | :--- | :--- | :--- | :--- |
| ? | \&combcircdbl; | F163 | F163 | COMBINING CIRCUMFLEX OVER TWO CHARACTERS |
| ? | \&combcurl; | F1C4 |  | COMBINING CURL |
| $?$ | \&combcurlhigh; | F1C5 |  | COMBINING CURL HIGH POSITION |
| ? | \&combflour; | F1C6 |  | COMBINING FLOURISH |

## Subrange 7: Combining superscript characters

This range includes superscript characters, typically placed above another base line character. They are found in many early German printed texts, and in a large number of Medieval manuscripts. The position immediately above a base line character distinguishes them from raised interlinear characters typically occupying a position immediately after another base line character. This latter type includes a handful of phonetic modifiers such as a raised ' $w$ ' indicating rounding, a raised ' $h$ ' indicating aspiration etc.

Unicode 4.0 has a selection of 13 superscript characters in the range Combining diacritical marks, 'a', 'e', 'i', 'o', ' $u$ ', ' $c$ ', ' d ', ' h ', ' m ', ' r ', ' t ', ' v ' and ' x '. They are located at the end of the range, 0363-036F (pp. 33-34 above).

The characters in the list below are documented in Andrea de Leeuw van Weenen, A Grammar of Möðruvallabók (CNWS 85), Leiden 2000.

| Glyph | MUFI entity | MUFI code point | Descriptive name |
| :--- | :--- | :--- | :--- |
| $æ$ | \&aeligsup; | F011 | COMBINING LATIN SMALL LETTER AE |

| $\stackrel{S}{8}$ | \&ssup; | F027 | COMBINING LATIN SMALL LETTER S |
| ¢ | \&slongsup; | F028 | COMBINING LATIN SMALL LETTER LONG S |
| T | \&tscapsup; | F02A | COMBINING LATIN LETTER SMALL CAPITAL T |
| y | \&ysup; | F02B | COMBINING LATIN SMALL LETTER Y |
| Z | \&zsup; | F02C | COMBINING LATIN SMALL LETTER Z |

## Subrange 8: Punctuation marks

This range includes punctuation marks that are not included in Unicode 4.0. The common marks, such as full stop, comma, colon, semicolon, question mark, hyphen and solidus, are all found in the range Basic Latin (p. 7 above). Some are also located in the range General Punctuation (p. 44). Finally, a few punctuation marks can be identified with characters in other ranges:

- Latin-1 Supplement: middle dot, 00B7 (p. 17)
- Georgian: right-pointing triangular dots, 10FB (p. 35)
- Mathematical Operators: upwards-pointing triangular dots (therefore), 2234 (p. 49)

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |

## Subrange 9: Critical and epigraphical signs

Critical signs are used in printed editions, indicating corruptions, deletions, additions etc. The majority of these signs are already in Unicode 4.0:

- Basic Latin: asterisk, 002A, square brackets, 005B and 005D, curly brackets, 007B and 007D, single vertical line, 007C (cf. pp. 8-15).
- General Punctuation: double vertical line, 2016 (cf. p. 45)
- Miscellaneous Mathematical Symbols-A: double square brackets, 27E6 and 27E7, and angle brackets, 27E8 and 27E9 (cf. p. 50)

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| $\ulcorner$ | \&luhsqb; | F1D2 |  | LEFT UPPER HALF SQUARE BRACKET |

A similar sign, the right angle substitution marker (a New Testament editorial symbol), has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 2E00 in Supplemental Punctuation. There is, however, no left angle substitution marker.

| $\urcorner$ | \&ruhsqb; | F1D3 |  | RIGHT UPPER HALF SQUARE BRACKET |
| :--- | :--- | :--- | :--- | :--- |
| $\llcorner$ | \&llhsqb; | F1D4 |  | LEFT LOWER HALF SQUARE BRACKET |
| $\lrcorner$ | \&rlhsqb; | F1D5 |  | RIGHT LOWER HALF SQUARE BRACKET |
| $\checkmark$ | \&luslst; | F16E | F16E | LEFT UPPER SLANTED STROKE |
| , | \&ruslst; | F16F | F16F | RIGHT UPPER SLANTED STROKE |

The left and right upper slanted strokes, F16E and F16F, have been accepted by the WG2 and are likely to be included in a future version of the Unicode Standard at code points 2EOC and 2EOD in Supplemental Punctuation.

| , | \&llslst; | F1D6 |  | LEFT LOWER SLANTED STROKE |
| :--- | :--- | :--- | :--- | :--- |
| , | \&rlsst; | F1D7 |  | RIGHT LOWER SLANTED STROKE |

## Subrange IO: Metrical symbols

This is the type of symbols used by Eduard Sievers in his Altgermanische Metrik (Halle: Max Niemeyer, 1893). They are still frequently used in text books, monographs and articles on Medieval Nordic metrics.

Thesaurus Linguae Grecae (TLG) has recently proposed a set of metrical symbols for Greek. This proposal has been approved by the Unicode Technical Committee, but not yet by ISO-10646. The TLG proposal includes symbols for the short syllable (breve) and for the combination of a short and long syllable (metrical short over long). The default character (anceps) is identified with MULTIPLICATION SIGN (00D7) in Latin-1 Supplement, and the symbol for long syllable (longum) is identified with FIGURE DASH (2012) or EN DASH (2013) in General Punctuation. Combinations of anceps, breve or longum with grave or acute accent can presumably be achieved by using COMBINING ACUTE ACCENT (0300) and COMBINING GRAVE ACCENT (0301) in Combining Diacritical Marks. However, this does not work in all applications, so for the time being precomposed characters will be useful.

Junicode and Alphabetum have metrical symbols in different locations of the Private Use Area, so a code point conflict has been inevitable for this range. Since Alphabetum has the largest selection, code points in this font have been chosen, metrical symbols being placed in the F700-F71F section. However, all duplicate code points in Junicode as of version 0.6.3 are listed below.

Alphabetum contains a number of additional metrical symbols, possibly of interest also for Medieval usage. See the F700-F76F section of this font.
Note that combining single and double vertical bars are located in Combining Diacritical Marks, code points 030D and 030E (p. 33 above). They are used to indicate stress (single bar) and stress + alliteration (double bar).

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |

| II | \&macrdblgrave; | F716 |  | METRICAL SYMBOL LONGUM WITH DOUBLE GRAVE (SECONDARY STRESS AND ALLITERATION) |
| $\underline{\square}$ | \&macrbreve; | F702 |  | METRICAL SYMBOL BREVE ABOVE LONGUM (SHORT OR LONG SYLLABLE) |
| The metrical short over long has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 23D3 in Miscellaneous Technical. |  |  |  |  |
| Ј | \&brevemacr; | F703 |  | METRICAL SYMBOL LONGUM ABOVE BREVE (SHORT OR LONG SYLLABLE) |
| The metrical long over short has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 23D2 in Miscellaneous Technical. |  |  |  |  |
| - | \&macrbreveacute; | F708 |  | METRICAL SYMBOL BREVE ABOVE LONGUM WITH ACUTE (SHORT OR LONG SYLLABLE WITH PRIMARY STRESS) |
| ㄴ | \&macrbrevegrave; | F709 |  | METRICAL SYMBOL BREVE ABOVE LONGUM WITH GRAVE (SHORT OR LONG SYLLABLE WITH SECONDARY STRESS) |
| ভ | \&dblbrevemacracute; | F71B |  | METRICAL SYMBOL RESOLVED LIFT WITH ACUTE (PRIMARY STRESS) |

The metrical long over two shorts has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 23D4 in Miscellaneous Technical. Note that this character does not include the stress mark (the acute accent).

| $\underset{\sim}{\prime \prime}$ | \&dblbrevemacrdblac; | F71C | METRICAL SYMBOL RESOLVED LIFT WITH DOUBLE ACUTE (PRIMARY STRESS AND ALLITERATION) |
| :---: | :---: | :---: | :---: |
| $\wedge$ | \&metrpause; | F714 | METRICAL SYMBOL PAUSE |
|  | \&combdblbrevebl; | F743 | COMBINING DOUBLE BREVE BELOW |

The combining bow (double breve) below has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 035C in Combining Diacritical Marks.

## Subranges II-I4

Reserved for future additions.

## Category 2: Precomposed characters

Precomposed characters are base line characters with one or more diacritical marks. They have been coordinated with characters in the Titus project and are allocated code points in the E000-F0FF section of the Private Use Area. Precomposed characters will be decommissioned as soon as mature smart font technology is widely available.

## Subrange 15: Characters with macron or overline

The overline (bar above) is probably the most used and also the most ambiguous of all abbreviation marks. There are two typical positions of the overline: above the full height of the majuscules and above the $x$-height of the minuscules. In the latter position it typically crosses the ascender of characters like ' $b$ ', ' $d$ ', ' $h$ ', ' $k$ ', ' $l$ ', 'thorn' and long ' $s$ '. If the word has a mixture of characters with and without ascenders, the bar should sometimes be kept in the upper position over all characters.

There are two typical lengths of the overline: less than the width of a character, like the macron, or the full width of the character, so that it can extend as a continuous line over several characters.

With present font technology, the overline is particularly difficult. With some fonts and operating systems it will change its vertical position depending on the height of each character. Thus, in an abbreviation such as 'ihc' for 'Iesus', the overline may have one position over ' $c$ ', a slightly higher position over ' i ' and an even higher position over ' $h$ '.

This range is intended as a work-around until mature smart font technology is available. It has separate code points for all characters where the overline crosses the ascender, either as a single stroke (macron-length) or as a continuous stroke (overline).

Some of these characters can be identified with characters already in Unicode 4.0:

- Latin Extended-A: 'd' with stroke, 0111, 'h' with stroke, 0127, and 'I' with macron, 012A (p. 24-25).
- Latin Extended-B: 'b' with stroke, 0180 (p. 27).

A few others have been included in the Private Use Area above, subrange 5:

- Modified base line abbreviation characters: ' $k$ ' with stroke, E7C5, 'thorn' with stroke, E73B, and 'long s' with stroke, E7FF (p. 58-59).

Font designers should take care to align the overlines on all characters, i.e. those already in the Unicode Standard and those listed here.
Finally, note that this range has a combining macron and a combining overline, each in two positions: one for minuscules (in the same height as the dot over ' i ') and one for majuscules (in the same height as the accents). These combining characters have 'hard' positions, so that they will have the same height regardless of the characters below. In this respect, they differ from 0304 COMBINING MACRON and 0305 COMBINING OVERLINE, which may be displayed with variable height. The combining overlines ought to have medium width, suitable for characters like ' O ' and ' $o$ '.

## Subrange 16: Characters with acute accent

 ' $\varnothing$ ' and ' $\varnothing$ ' in Latin Extended- $B$ (p.27). Many consonants also appear with acute accent, such as ' C ', ' c ', ' L ', ' l ', ' N ', ' n ', ' R ', ' r , ' S ', ' s ', ' Z ' and ' z ' in Latin Extended-A, 'G' and ' g ' in Latin Extended-B, and ' K ', ' k ', 'M', 'm', ' P ', ' p ', ' W ' and ' w ' in Latin Extended Additional.

Combinations of consonants and the acute accent are presumably rare in Medieval sources and have therefore not been included in the present recommendation. The list below contains characters that do appear with acute accent; the characters ' j ' and ' $v$ ' should be seen as semi-vowels in this context, alternating with ' $i$ ' and ' $u$ '.

Note that two characters have duplicate code points in the present version of Junicode (0.6.3): E20C and E60C.
The combining acute accent, 0301, is located in Combining Diacritical Marks (p. 32).

## Subrange 18: Characters with dot above

Unicode 4.0 has 40 characters with a dot above in three ranges: ' C ', ' $\mathrm{c}^{\prime}$, ' E ', ' $\mathrm{e}^{\prime}$, ' G ', ' g ', ' I ( ( i ' is already in Basic Latin), ' Z ', and ' z ' in Latin Extended- $A$, 'A', 'a', 'O' and 'o', in Latin-Extended-B, and 'B', 'b', 'D', 'd', 'F', 'f', 'H', 'h', 'M', 'm', 'N', 'n', 'P', 'p', 'R', 'r', 'S', 's', 'T', 't', 'W', 'w', 'X', 'x', 'Y', ' $y$ ' and long ' s ' (no capital version) in Latin Extended Additional.

Many of these combinations are presumably rare in Medieval sources and only a few have therefore been included in the present recommendation. The list below contains additional characters that do appear with a dot above. The combining dot above, 0307, is located in Combining Diacritical Marks (p. 33).

| Glyph | MUFI entity | MUFI code point | MUFI descriptive name |

## Subrange 19: Characters with dot below

Unicode 4.0 has no fewer than 38 characters with a dot below, i.e. essientially the whole alphabet, 'A-Z' and 'a-z', in Latin Extended Additional. The list below contains additional character combinations. The combining dot below, 0323, is located in Combining Diacritical Marks (p. 33).

Note that the position of the dot below raises problems for the font designer, especially in connection with characters that have descenders or diacritics such as the ogonek. Individually designed glyphs will thus be useful even with a smart font solution.

| Glyph | MUFI entity | MUFI code point | MUFI descriptive name |

## Subrange 20: Characters with diaeresis

 Latin Extended-A (p. 23), as well as over the consonants 'H', 'h', 'W', 'w', 'X', 'x' and 't' in Latin Extended Additional (p. 38).

Combinations with consonants and diaeresis are presumably rare in Medieval sources and have therefore not been included in the present recommendation. The list below contains additional vowels that do appear with diaeresis.

The combining diaeresis, 0308, is located in Combining Diacritical Marks (p. 33).

| Glyph | MUFI entity | MUFI code point | MUFI descriptive name |
| :---: | :---: | :---: | :---: |

## Subrange 21 : Characters with hook above

Unicode 4.0 has a hook above (curl) in combination with ' A , ' a ', ' I , ' i ', ' O ', ' o ', ' Y ' and ' y ' in Latin Extended Additional (p. 38 above). However, this curl is loose and has a different design from the one used in e.g. Medieval Nordic sources, so for this reason these and a few other characters have been given separate code points in the list below. The combining curls, F1C5 (high position) and F1C4 (medium-high position), are located in PUA subrange 6 Combining marks (p. 61).

| Glyph | MUFI entity | MUFI code point | MUFI descriptive name |

## Subrange 23: Characters with breve

Unicode 4.0 has breve over the vowels ' A ', 'a', ' E ', ' $\mathrm{e}^{\prime}$, ' I ', ' i ', ' O ', ' o ', ' U ' and ' u ', and also over the consonant ' g ', all in Latin Extended-A ( p . 23 above). The list below contains additional character combinations. The combining breve, 0306, is located in Combining Diacritical Marks (p. 33).

Note that all four characters in the list below have duplicate code points in the present version of Junicode (0.6.3).

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :---: | :---: | :---: | :---: | :---: |
| $\breve{A}$ | \&AEligbreve; <br> = \Æ + \&combbreve; | $\begin{aligned} & \text { E03F } \\ & =00 \mathrm{C} 6+0306 \end{aligned}$ | F13C | LATIN CAPITAL LIGATURE AE WITH BREVE <br> = LATIN CAPITAL LIGATURE AE + COMBINING BREVE |
| $\breve{\chi}$ | \&aeligbreve; <br> = \æ + \&combbreve; | $\begin{aligned} & \text { E43F } \\ & =00 \mathrm{E} 6+0306 \end{aligned}$ | F13D | LATIN SMALL LIGATURE AE WITH BREVE <br> = LATIN SMALL LIGATURE AE + COMBINING BREVE |

## Subrange 24: Characters with macron and breve

Unicode 4.0 has no precomposed characters with both macron and breve. The list below contains expected character combinations.
Note that seven of the characters in the list below have duplicate code points in the present version of Junicode (0.6.3): E410, E43D, E4B7, E537, E61B, E70B and E775. The combining macron, 0304, and the combining breve, 0306, are located in Combining Diacritical Marks (p. 32-33).

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |

| :--- | :--- | :--- | :--- | :--- |

## Subrange 25: Characters with macron and acute

Unicode 4.0 has macron and acute over the vowels ' E ', 'e', ' O ' and ' o ' in Latin Extended Additional (p. 38 above). The list below contains additional character combinations.

Note that five characters in the list below have duplicate code points in the present version of Junicode (0.6.3): E40A, E43A, E535, E709 and E773. In addition, Junicode has code points for 'e' with macron and acute, F185, and 'o' with macron and acute, F189. Since the latter two characters are in Latin Extended Additional, at code points 1E16 and 1E52 respectively, they might be considered for deprecation (cf. pp. 38 and 40 above).

The combining macron, 0304, and the combining acute accent, 0301, are located in Combining Diacritical Marks (p. 32).

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :---: | :---: | :---: | :---: | :---: |

Subranges 26-29:
Reserved for future additions.

## Category 3: Variant letter forms

In general, variant letter forms are not characters in the Unicode sense of the word. However, the distinction between characters and variant letter forms is not always clear, and some of the letter forms in the list may eventually prove to be recognised as characters according to the strict Unicode criteria.

This category will be divided according to national or regional criteria. Note that many characters are relevant for more than one range, due to the dissemination of styles across Medieval Europe.

## Subrange 30: Nordic

This subrange contains commonly recognised variant letter forms in Medieval Nordic primary sources. Note that the majority of these characters are inherited from Insular and Continental styles, and will thus be relevant for many other European literatures.

To minimise conflicts with Junicode, code points in this font have been used wherever possible. Additional letter forms have been placed in a new section of the PUA commencing with F200.

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :---: | :---: | :---: | :---: | :---: |
| $a$ | \&ains; | F200 |  | LATIN SMALL LETTER INSULAR A |
| This is the single-storey ' $a$ ' of the Insular style, similar in shape to modern italic ' $a$ '. |  |  |  |  |
| $a$ | \&ainsenl; | F201 |  | LATIN ENLARGED SMALL LETTER INSULAR A |
| This is the enlarged variant of 'a', triangular in shape. Cf. D.A. Seip, Palcoografi: Norge og Island (Nordisk kultur 23:B), Oslo etc. 1954 , p. 27. |  |  |  |  |
| C | \&aopen; | F202 |  | LATIN SMALL LETTER A OPEN FORM |

This is the traditional 'open a' from early Carolingian script, similar in shape to 'cc' and easily mistaken for ' $u$ '.

| a | \&aclose; | F203 |  | LATIN SMALL LETTER A CLOSED FORM |
| :---: | :---: | :---: | :---: | :---: |
| Cf. D.A. Seip, Paleoggraf: Norge og Island (Nordisk kultur 23:B), Oslo etc. 1954, p. 70. |  |  |  |  |
| $\nsupseteq$ | \&aeligred; | F204 |  | LATIN SMALL LIGATURE AE WITH MISSING BOTTOM STROKE |
| Cf. Johs. Brøndum-Nielsen, ed., Palcoggrafi: Danmark og Sverige (Nordisk kultur 23:A), Stockholm etc. [1943], p. 102. |  |  |  |  |
| d | \&AOligred; | F205 |  | LATIN CAPITAL LIGATURE AO NECKLESS |
| © | \&aoligred; | F206 |  | LATIN SMALL LIGATURE AO NECKLESS |
| These two letter forms should be analysed and designed as the ligature of ' $a+0$ ' without the neck of the ' $a$ '. |  |  |  |  |
| $\partial$ | \&dunc; | F109 | F109 | LATIN LETTER UNCIAL D |
| This is similar to a separate character in Medieval Welsh. |  |  |  |  |
| E | \&eunc; | F10A | F10A | LATIN LETTER UNCIAL E |
| $F$ | \&Fins; | F10C |  | LATIN CAPITAL LETTER INSULAR F |

The capital Insular ' f ' has not been included in the present version of Junicode (0.6.3), but since the small variant is located at F10D, the code point F10C has been selected here.

| F | \&fins; | F10D | F10D | LATIN SMALL LETTER INSULAR F |
| :--- | :--- | :--- | :--- | :--- |

| $\boldsymbol{\beta}$ | \&finsclose; | F207 |  | LATIN SMALL LETTER INSULAR F CLOSED FORM |
| :--- | :--- | :--- | :--- | :--- |
| h | \&hins; | F110 | F110 | LATIN CAPITAL LETTER INSULAR H |
| J | \&jdl; | E55C | F6BE | LATIN SMALL LETTER J DOTLESS |

The dotless ' j ' has been accepted by the UTC and WG2 and is likely to be included in a future version of the Unicode Standard at code point 0237 in Latin Extended-B. Since this character already is in Titus Cyberbit at E55C, this code point has been chosen rather than F6BE in Junicode.

| lc | \&kunc; | F208 |  | LATIN LETTER UNCIAL K |
| :--- | :--- | :--- | :--- | :--- |
| k | \&kclose; | F209 |  | LATIN SMALL LETTER K CLOSED FORM |
| C | \&munc; | F11A | F11A | LATIN LETTER UNCIAL M |
| OO | \&OOlig; | F20A |  | LATIN CAPITAL LIGATURE OO |
| OO | \&oolig; | F20B |  | LATIN SMALL LIGATURE OO |

The 'o+o' ligature was introduced by the Icelander Jón Ólafsson from Grunnavík in the 18th century. Cf. Jón Helgason, Jon Olafsson fra Grunnavik, Copenhagen 1926.

| $\mathrm{O}^{\circ}$ | $\&$ OEligred; | F20C |  | LATIN CAPITAL LIGATURE OE WITH MISSING BOTTOM STROKE |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{O}^{\circ}$ | $\&$ oeligred; | F20D |  | LATIN SMALL LIGATURE OE WITH MISSING BOTTOM STROKE |

These two letter forms should be analysed and designed as the ligature of 'o+e' without the bottom (finishing) stroke of the ' $e$ '.

| 2 | \&rrot; | F20E |  | LATIN SMALL LETTER R ROTUNDA |
| :---: | :---: | :---: | :---: | :---: |
| l | \&rins; | F125 | F125 | LATIN SMALL LETTER INSULAR R |
| 1 | \&slongdes; | F127 | F127 | LATIN SMALL LETTER LONG S DESCENDING |
| This character extends below the base line, while the ordinary long 's' is located on the base line. |  |  |  |  |
| $\tau$ | \&tunc; | F129 | F129 | LATIN LETTER UNCIAL T |
| 1 | \&Vins; | F210 |  | LATIN CAPITAL LETTER INSULAR V (VENTH) |
| 1 | \&vins; | F211 |  | LATIN SMALL LETTER INSULAR V (VENTH) |
| The capital and small Insular ' v ' are partially similar to 01F7 LATIN CAPITAL LETTER WYNN and 01BF LATIN LETTER WYNN in Latin Extended-B. Note that the Medieval Nordic variants are open, resembling the character ' $y$ ', and are transliterated with ' $v$ ', not with ' $w$ ' like in Old English. |  |  |  |  |
| W | \&YYlig; | F212 |  | LATIN CAPITAL LIGATURE YY |
| y | \&yylig; | F213 |  | LATIN SMALL LIGATURE YY |
| The ' $y+y$ ' ligature was introduced by the Icelander Jón Ólafsson from Grunnavík in the 18th century. Cf. Jón Helgason, Jon Olafsson fra Grunnavik, Copenhagen 1926. |  |  |  |  |

Additional characters: From F214 and upwards; extent to be decided in the next version of the recommendation.

## Subrange 3 I: English

Several of the specific characters used in Old English primary sources have been listed in subrange 30 above. Additional characters are listed in the present subrange, using Junicode code points wherever possible.

| Glyph | MUFI entity | MUFI code point | (Junicode) | MUFI descriptive name |
| :--- | :--- | :--- | :--- | :--- |
| A | \&Asqu; | F13A | F13A | LATIN CAPITAL LETTER A SQUARE FORM |
| This particular variant is found in some manuscripts, particularly CCCC 173, the Parker Chronicle. |  |  |  |  |
| C | \&Csqu: | F106 | F106 | LATIN CAPITAL LETTER C SQUARE FORM |
| Б | \&Gsqu; | F10E | F10E | LATIN CAPITAL LETTER G SQUARE FORM |
| б | \&Gins; | F10B |  | LATIN CAPITAL LETTER INSULAR G |

The capital Insular ' g ' has not been included in the present version of Junicode (0.6.3), but since the small variant is located at F10F, the vacant code point F10B has been selected here.

| $\delta$ | \& gins; | F10F | F10F | LATIN SMALL LETTER INSULAR G |
| :---: | :---: | :---: | :---: | :---: |

The Insular ' $g$ ' has been accepted by WG2 (not yet by UTC) and may be included in a future version of the Unicode Standard at code point 1D79 in Phonetic Extensions. Note that the proposal has been based on the usage of this character in phonetic notation of Irish.

| S | \&Sclose; |  | F126 | LATIN CAPITAL LETTER S CLOSED FORM |
| :--- | :--- | :--- | :--- | :--- |

This character is not part of the MUFI recommendation, but has been included with its Junicode code point for the sake of reference. It is possibly a design by the type cutter of the font Junius, on which Junicode is based.

| $f$ | \&slongbarslash; | F14F | F14F | LATIN SMALL LETTER LONG S WITH DIAGONAL STROKE |  |  |
| :--- | :--- | :--- | :--- | :--- | :---: | :---: |
| A similar character, though with a horizontal bar in a higher position, is assigned to E7FF in PUA subrange 5, p. 59 above. |  |  |  |  |  |  |
| 直 | \&thornbarslash; | F149 | F149 | LATIN SMALL LETTER THORN WITH DIAGONAL STROKE |  |  |
| A similar character, though with a horizontal bar, is assigned to E73B in PUA subrange 5, p. 59 above. |  |  |  |  |  |  |

Additional characters: These can be placed in vacant slots in the section F100-F13B, where almost 50 unallocated slots are available. Junicode has English letter forms in this section.

## Subranges 32-

For future additions.

## Appendix: How many characters?

The short answer to this question is that the present recommendation contains 828 characters. However, there are many types of characters in this recommendation, so it may be useful to make a breakdown of characters into a number of categories:

## I. Alphabetic, base characters

This category contains the basic letter forms, e.g. 'a', 'b' and 'c'. Case variants are also included, such as small (minuscule), 'a', enlarged minuscule, 'a', capital, ' $A$ ', and small capital, ' $A$ '. The same applies to ligatures, e.g. ' $\mathfrak{X}$ ' and ' $æ$ '.

## 2. Alphabetic, precomposed characters

This category contains base characters with one or more loose diacritics, such as 'á’, ‘ä’, and 'â'. Characters with fixed diacritics, such as the cedilla or the ogonek, are counted as base characters, and the same applies to characters with a bar or a slash across an ascender or a descender.

## 3. Symbols

This category contains all kinds of symbols, including digits, but excludes punctuation marks.

## 4. Combining marks

This category contains accents, abbreviation signs and alphabetic characters that appear above or below another base character.

## 5. Punctuation marks

This category contains the basic punctuation marks, e.g. the comma and the colon, and various kinds of quotation marks. Note that is is sometimes difficult to draw the line between symbols and punctuation marks.

## 6. Formatting and space characters

This category includes characters for which there are no glyphs, either because they specify formatting of the text or because they encode space (of variable width) between visible characters.

| Range | Alphabetic characters |  | Symbols | Comb. | Punct. | Format \& space | Total |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | base | precomp. |  |  |  |  |  |
| Basic Latin | 52 |  | 34 |  | 8 | 2 | 96 |
| Latin-1 Supplement | 11 | 51 | 28 |  | 4 | 2 | 96 |
| Latin Extended-A | 16 | 34 |  |  |  |  | 50 |
| Latin Extended-B | 16 | 12 |  |  |  |  | 28 |
| IPA Extensions | 15 |  |  |  |  |  | 15 |
| Spacing Modifying Letters | 6 |  |  |  |  |  | 6 |
| Combining Diacritical Marks |  |  |  | 31 |  |  | 31 |
| Greek and Coptic | 1 |  |  |  |  |  | 1 |
| Georgian |  |  |  |  | 1 |  | 1 |
| Runic | 2 |  |  |  |  |  | 2 |
| Phonetic Extensions | 15 |  |  |  |  |  | 15 |
