

Errata

Errata

- Paper I–III: The column length of the BPX-70 given in Papers I, II and III (70 m) is incorrect. The correct length is 60 m. This is a typing error in Paper I (that was copied in Papers II and III). The correct length is applied for calculating the injector pressures and flow settings.
- Paper II: The mass spectra of the 19:4 compound given in Paper II was of too poor quality to determine the the double bond positions, and the compound should therefore be denoted as 19:4 $n-x$ (as in Paper VIII) instead of 19:4 $n-3$. The ECL values given in Paper VIII indicate that this is not the $n-3$ isomer.
- Paper I, section 3.5: Typographical error: ' ≤ 0.5 ' should be ' < -0.5 '.
- Paper X, Equation 10: Typographical error: The entire equation should be under the root (see equation 15 in section 1.4).
